

Sprint 4 planning

By LightCity

High priority	
Light Class implementation	Controlling intensity of light using PWM Low priority: Detect a burnt led - Veselin
Node Class implementation	Base of state machine with integrated components - Feng
Light Sensor Class	POC for LDR and map values - Lisa
Ultrasonic Sensor Class	Detecting movement from as far as possible - Mykyta
Central Monitor	Check when a node
Low priority	
Mock tests	Mock tests to test state transitions and state machine behaviour - Jovan
